

We transform “gummy smiles” into bigger, brighter, healthier smiles.

Do you have a “gummy smile”—where a lot of your gums show, while your teeth appear short and stubby?

If so, make an appointment at Periodontal Associates of Memphis to see if an Esthetic Crown Lengthening might be right for you.

What is Esthetic Crown Lengthening?

Esthetic Crown Lengthening—or a Gum Lift—is a safe and effective procedure that can dramatically improve the attractiveness of your smile. This procedure involves reshaping excess gum and bone tissue to uncover hidden enamel, making teeth look longer.

With patient comfort and safety always top of mind, we perform Esthetic Crown Lengthening with the state-of-the-art Light Walker Laser, which minimizes discomfort and speeds healing. Plus, sedation is available to ensure you are at ease and relaxed during the procedure.

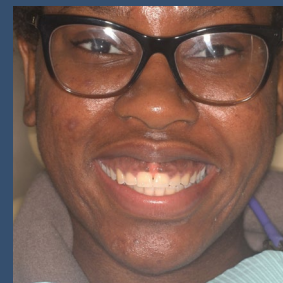

Can you also restore broken or uneven teeth?

Our highly skilled team can enhance your smile while restoring teeth ... all with expert care. Sometimes Esthetic Crown Lengthening can be accomplished without restorations. We can also provide dental implants if you have missing teeth, or if your teeth are worn or fractured, we can work with a cosmetic dentist to pair this procedure with veneer, crown or bridge restorations.

Whom should I trust with my smile?

When you need precise, specialized cosmetic periodontal surgery, you want the very best surgeons. Both Dr. Roger Craddock and Dr. Mitchel Godat at Periodontal Associates of Memphis have been named Top Periodontists in Memphis for the past eight years. Dr. Craddock has been a periodontal surgeon for 29 years, and Dr. Godat is a board-certified periodontist.
